(57) **ABSTRACT**

The description relates to devices, such as computing devices that have hinged portions. One example can include a first portion and a second portion and a flexible display secured to the first and second portions. This example can also include a hinge assembly rotatably securing the first and second portions. The hinge assembly can be fixedly secured to the second portion and movably secured to the first portion such that a length of the hinge assembly can change when the first portion and second portion are rotated relative to one another.
